

Ranchmate™ brings technology developed originally for the utility industry to the AG world. These products offer a stronger, more durable, and safer alternative to traditional wire and fencing products. Splicing and bracing solutions are based on technology that, when applied to fence wire, provides a secure fit without clamps, protecting the wire from abrasion and fatigue damage at a critical point. All of these products require no special tools.

FFA® LICENSED

Founded in 1928, the National FFA Organization™ (Future Farmers of America) brought together students, teachers and agribusiness to solidify support for agricultural education. In Kansas City's Baltimore Hotel, 33 young farmboys chartered a course for the future. They could not have foreseen how the organization would grow and thrive.

Since 1928, over 38 million agriculture students have donned the official FFA® jacket and championed the FFA® creed.

The National FFA Organization™ makes a positive difference in the lives of students by developing their potential for premier leadership, personal growth and career success through agricultural education. Now, the organization is expanding the nation's view of "traditional" agriculture and finding new ways to infuse agriculture into the classroom.

Today, Ranchmate™ embraces the spirit of the 33 young men by developing by bringing our line of fence splices, insulated fence products, dead-ends and accessories to market. Ranchmate™ contacted the Future Farmers of America, the leader in agriculture education, and became an official licensee.

Ranchmate™ products are perfect for your FFA® Supervised Agricultural Experience (SAE) Programs such as:

Agribusiness

Agriscience

Equine Marketing

Fence Building

SAE Programs have no gender restrictions. In addition, there are no tools required. See your advisor for more information.
